### **SUM3D Dental**

Suitable for any material, CIMSYS-TEM's SUM3D Dental open CAM system has a simple and intuitive graphic interface and offers an extensive range of automated and customizable features. Material consumption, tool paths, strategies and offsets are optimized for a wide range of milling solutions and all libraries are customizable. Other time- and cost-reducing features include: automatic management of stocks, implants, abutments, interlock, undercuts and holes; prep-line, pin and connector creation; material optimization and nesting; and collision check, statistics and reporting.
